

CSP in Python

Overview

- **Python_constraint** is a simple package for solving CSP problems in Python
- Installing it
- Using it
- Examples
 - Magic Squares
 - Map coloring
 - Sudoku puzzles
 - HW4: Battleships

Installation

- On your own computer
 - pip install python-constraint
 - sudo pip install python-constraint
 - [easy_install](#) python-constraint
- Use on gl
 - It's installed in ~finin/471python
- On github
 - <https://github.com/python-constraint>

Simple Example

```
>>> from constraint import *
>>> p = Problem()
>>> p.addvariable("a", [1,2,3])
>>> p.addvariable("b", [4,5,6])
>>> p.getsolutions()
[{'a': 3, 'b': 6}, {'a': 3, 'b': 5}, {'a': 3, 'b': 4},
 {'a': 2, 'b': 6}, {'a': 2, 'b': 5}, {'a': 2, 'b': 4},
 {'a': 1, 'b': 6}, {'a': 1, 'b': 5}, {'a': 1, 'b': 4}]
>>> p.addConstraint(lambda x,y: 2*x == y, ('a', 'b'))
>>> p.getsolutions()
[{'a': 3, 'b': 6}, {'a': 2, 'b': 4}]
```

Simple Example

```
>>> from constraint import *
>>> p = Problem()
>>> p.addvariable("a", [1,2,3])
>>> p.addvariable("b", [4,5,6])
>>> p.getsolutions()
[{'a': 3, 'b': 6}, {'a': 3, 'b': 5}, {'a': 3, 'b': 4},
 {'a': 2, 'b': 6}, {'a': 2, 'b': 5}, {'a': 2, 'b': 4},
 {'a': 1, 'b': 6}, {'a': 1, 'b': 5}, {'a': 1, 'b': 4}]

>>> p.addConstraint(lambda x,y: 2*x==y, ('a','b'))
>>> p.getsolutions()
[{'a': 3, 'b': 6}, {'a': 2, 'b': 4}]
```

variable name
domain
two variables
constraint function

Magic Square

- An NxN array on integers where all rows, columns and diagonals sum to the same number
- Given N (e.g., 3) and the magic sum (e.g., 15) find the cell values
- What are the
 - Variables & their domains
 - Constraints

2	7	6	→15
9	5	1	→15
4	3	8	→15

15 ↘ ↓ 15 15 15 15 ↙ 15

3x3 Magic Square

```
from constraint import *          numbers as variables: 0..8
p = Problem()                    domain of each is 1..10
p.addvariables(range(9), range(1,10))    built-in constraint functions
p.addConstraint(AllDifferentConstraint(), range(9))
p.addConstraint(ExactSumConstraint(15), [0,4,8])
p.addConstraint(ExactSumConstraint(15), [2,4,6])
for row in range(3):
    p.addConstraint(ExactSumConstraint(15),
                     [row*3+i for i in range(3)])
for col in range(3):
    p.addConstraint(ExactSumConstraint(15),
                     [col+3*i for i in range(3)])
```

3x3 Magic Square

```
sols = p.getsolutions()
print sols

for s in sols:
    print
    for row in range(3):
        for col in range(3):
            print s[row*3+col],
    print
```

3x3 Magic Square

```
> python ms3.py
```

```
[{0:6,1:7,2:2,...8:4}, {0:6,1:...}, ...]
```

6 7 2

1 5 9

8 3 4

6 1 8

7 5 3

2 9 4

... six more solutions ...

2	7	6	→15
9	5	1	→15
4	3	8	→15

15 ↗ 15 ↓ 15 ↓ 15 ↘ 15

Constraints

- `FunctionConstraint(f, v)`
- Arguments:
 - F: a function of N ($N > 0$) arguments
 - V: a list of N variables
- Function can be defined & referenced by name or defined locally via lambda expressions
 - `p.addConstraint(lambda x,y:x==2*y,[11,22])`
 - `def dblfn(x,y): return x == 2*y`
`P.addConstraint(dblfn, [11,22])`

Constraints

- Constraints on a set of variables:
 - AllDifferentConstraint()
 - AllEqualConstraint()
 - MaxSumConstraint()
 - ExactSumConstraint()
 - MinSumConstraint()
- Example:
 - `p.addConstraint(ExactSumConstraint(100), [11,...19])`
 - `p.addConstraint(AllDifferentConstraint(), [11,...19])`

Constraints

- Constraints on a set of possible values
 - InSetConstraint()
 - NotInSetConstraint()
 - SomeInSetConstraint()
 - SomeNotInSetConstraint()

Map Coloring

```
def color(map, colors=['red','green','blue']):  
    (vars, adjoins) = parse_map(map)  
    p = Problem()  
    p.addvariables(vars, colors)  
    for (v1, v2) in adjoins:  
        p.addConstraint(lambda x,y: x!=y, [v1, v2])  
    solution = p.getSolution()  
    if solution:  
        for v in vars:  
            print "%s:%s " % (v, solution[v]),  
            print  
    else:  
        print 'No solution found :-('  
  
austrailia = "SA:WA NT Q NSW V; NT:WA Q; NSW: Q V; T:"
```

Map Coloring

```
australia = 'SA:WA NT Q NSW V; NT:WA Q; NSW: Q V; T:'
```

```
def parse_map(neighbors):  
    adjoins = []  
    regions = set()  
    specs = [spec.split(':') for spec in neighbors.split(';')]  
    for (A, Aneighbors) in specs:  
        A = A.strip();  
        regions.add(A)  
        for B in Aneighbors.split():  
            regions.add(B)  
            adjoins.append([A,B])  
    return (list(regions), adjoins)
```

Sudoku

```
def sudoku(initvalue):
    p = Problem()
    # Define a variable for each cell: 11,12,13...21,22,23...98,99
    for i in range(1, 10) :
        p.addvariables(range(i*10+1, i*10+10), range(1, 10))
    # Each row has different values
    for i in range(1, 10) :
        p.addConstraint(AllDifferentConstraint(), range(i*10+1, i*10+10))
    # Each colum has different values
    for i in range(1, 10) :
        p.addConstraint(AllDifferentConstraint(), range(10+i, 100+i, 10))
    # Each 3x3 box has different values
    p.addConstraint(AllDifferentConstraint(), [11,12,13,21,22,23,31,32,33])
    p.addConstraint(AllDifferentConstraint(), [41,42,43,51,52,53,61,62,63])
    p.addConstraint(AllDifferentConstraint(), [71,72,73,81,82,83,91,92,93])
    p.addConstraint(AllDifferentConstraint(), [14,15,16,24,25,26,34,35,36])
    p.addConstraint(AllDifferentConstraint(), [44,45,46,54,55,56,64,65,66])
    p.addConstraint(AllDifferentConstraint(), [74,75,76,84,85,86,94,95,96])
    p.addConstraint(AllDifferentConstraint(), [17,18,19,27,28,29,37,38,39])
    p.addConstraint(AllDifferentConstraint(), [47,48,49,57,58,59,67,68,69])
    p.addConstraint(AllDifferentConstraint(), [77,78,79,87,88,89,97,98,99])
    # add unary constraints for cells with initial non-zero values
    for i in range(1, 10) :
        for j in range(1, 10):
            value = initvalue[i-1][j-1]
            if value: p.addConstraint(lambda var, val=value: var == val, (i*10+j,))

    return p.getSolution()
```

Sudoku Input

```
easy = [[0,9,0,7,0,0,8,6,0],  
        [0,3,1,0,0,5,0,2,0],  
        [8,0,6,0,0,0,0,0,0],  
        [0,0,7,0,5,0,0,0,6],  
        [0,0,0,3,0,7,0,0,0],  
        [5,0,0,0,1,0,7,0,0],  
        [0,0,0,0,0,0,1,0,9],  
        [0,2,0,6,0,0,0,5,0],  
        [0,5,4,0,0,8,0,7,0]]
```

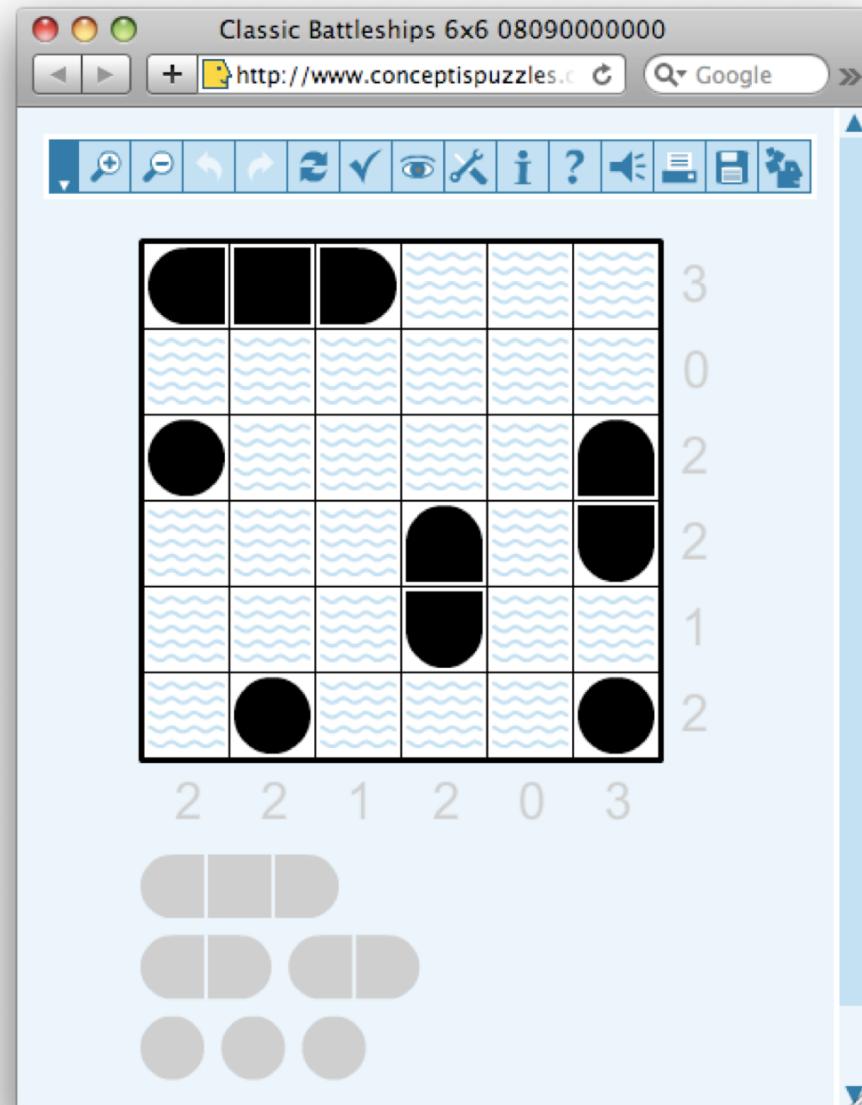

Battleship Puzzle

- NxN grid
- Each cell occupied by water or part of a ship
- Given
 - Ships of varying lengths
 - Row and column sums of number of ship cells
 - Hints for some cells
- What are
 - variables and domains
 - constraints

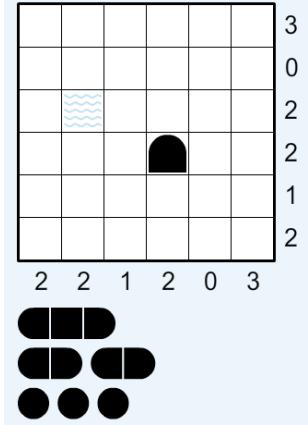

Battleship Puzzle

- NxN grid
- Each cell occupied by water or part of a ship
- Given

A HW3 Problem

- Write a CSP program to solve 6x6 battleships with 3 subs, 2 destroyers and 1 carrier
- Given row and column sums and several hints
- Hints: for a location, specify one of {water, top, bottom, left, right, middle, circle}
