View ALL Data Sets

Welcome to the UC Irvine Machine Learning Repository!

• Est. 1987!
• 370 data sets

We currently maintain 233 data sets as a service to the machine learning community. You may view all data sets through our searchable interface. Our old web site is still available, but is still in beta. If you wish to donate a data set, please consult our donation policy. For any other questions, feel free to contact the Repository librarians. We have also set up a mirror site for the Repository.

Latest News:

- 2010-03-01: Note from donor regarding Netflix data
2009-10-16: Two new data sets have been added.
2009-09-14: Several data sets have been added.
2008-07-23: Repository mirror has been set up.
2008-03-24: New data sets have been added!
2007-06-25: Two new data sets have been added: UJI Pen Characters, MAGIC Gamma Telescope
2007-04-13: Research papers that cite the repository have been associated to specific data sets.

Featured Data Set: Yeast

Task: Classification
Data Type: Multivariate
Attributes: 8
Instances: 1484

Predicting the Cellular Localization Sites of Proteins

Newest Data Sets:

- 2012-10-21: UCI QtyT40I10D100K
2012-10-19: UCI Legal Case Reports
2012-09-29: UCI seeds
2012-08-30: UCI Individual household electric power consumption
2012-08-15: UCI Northix
2012-08-06: UCI PAMAP2 Physical Activity Monitoring
2012-08-04: UCI Restaurant & consumer data
2012-08-03: UCI CNAE-9

Most Popular Data Sets (hits since 2007):

- 386214: Iris
272233: Adult
237503: Wine
195947: Breast Cancer Wisconsin (Diagnostic)
182423: Car Evaluation
151635: Abalone
135419: Poker Hand
113024: Forest Fires

Zoo example

```
aima-python> python
```

```
>>> from learning import *
```

```
>>> zoo
```

```
<DataSet(zoo): 101 examples, 18 attributes>
```

```
>>> dt = DecisionTreeLearner()
```

```
>>> dt.train(zoo)
```

```
>>> dt.predict(['shark',0,0,1,0,0,1,1,1,1,0,0,1,0,1,0,0]) #eggs=1  
'fish'
```

```
>>> dt.predict(['shark',0,0,0,0,0,1,1,1,1,0,0,1,0,1,0,0]) #eggs=0  
'mammal'
```

Zoo example

```
>> dt.dt
```

```
DecisionTree(13, 'legs', {0: DecisionTree(12, 'fins', {0:  
DecisionTree(8, 'toothed', {0: 'shellfish', 1: 'reptile'}), 1:  
DecisionTree(3, 'eggs', {0: 'mammal', 1: 'fish'})}), 2:  
DecisionTree(1, 'hair', {0: 'bird', 1: 'mammal'}), 4:  
DecisionTree(1, 'hair', {0: DecisionTree(6, 'aquatic', {0:  
'reptile', 1: DecisionTree(8, 'toothed', {0: 'shellfish', 1:  
'amphibian'})}), 1: 'mammal'}), 5: 'shellfish', 6:  
DecisionTree(6, 'aquatic', {0: 'insect', 1: 'shellfish'}), 8:  
'shellfish'})
```

Zoo example

```
>>> dt.dt.display()
```

```
Test legs
```

```
legs = 0 ==> Test fins
```

```
    fins = 0 ==> Test toothed
```

```
        toothed = 0 ==> RESULT = shellfish
```

```
        toothed = 1 ==> RESULT = reptile
```

```
    fins = 1 ==> Test eggs
```

```
        eggs = 0 ==> RESULT = mammal
```

```
        eggs = 1 ==> RESULT = fish
```

```
legs = 2 ==> Test hair
```

```
    hair = 0 ==> RESULT = bird
```

```
    hair = 1 ==> RESULT = mammal
```

```
legs = 4 ==> Test hair
```

```
    hair = 0 ==> Test aquatic
```

```
        aquatic = 0 ==> RESULT = reptile
```

```
        aquatic = 1 ==> Test toothed
```

```
            toothed = 0 ==> RESULT = shellfish
```

```
            toothed = 1 ==> RESULT = amphibian
```

```
    hair = 1 ==> RESULT = mammal
```

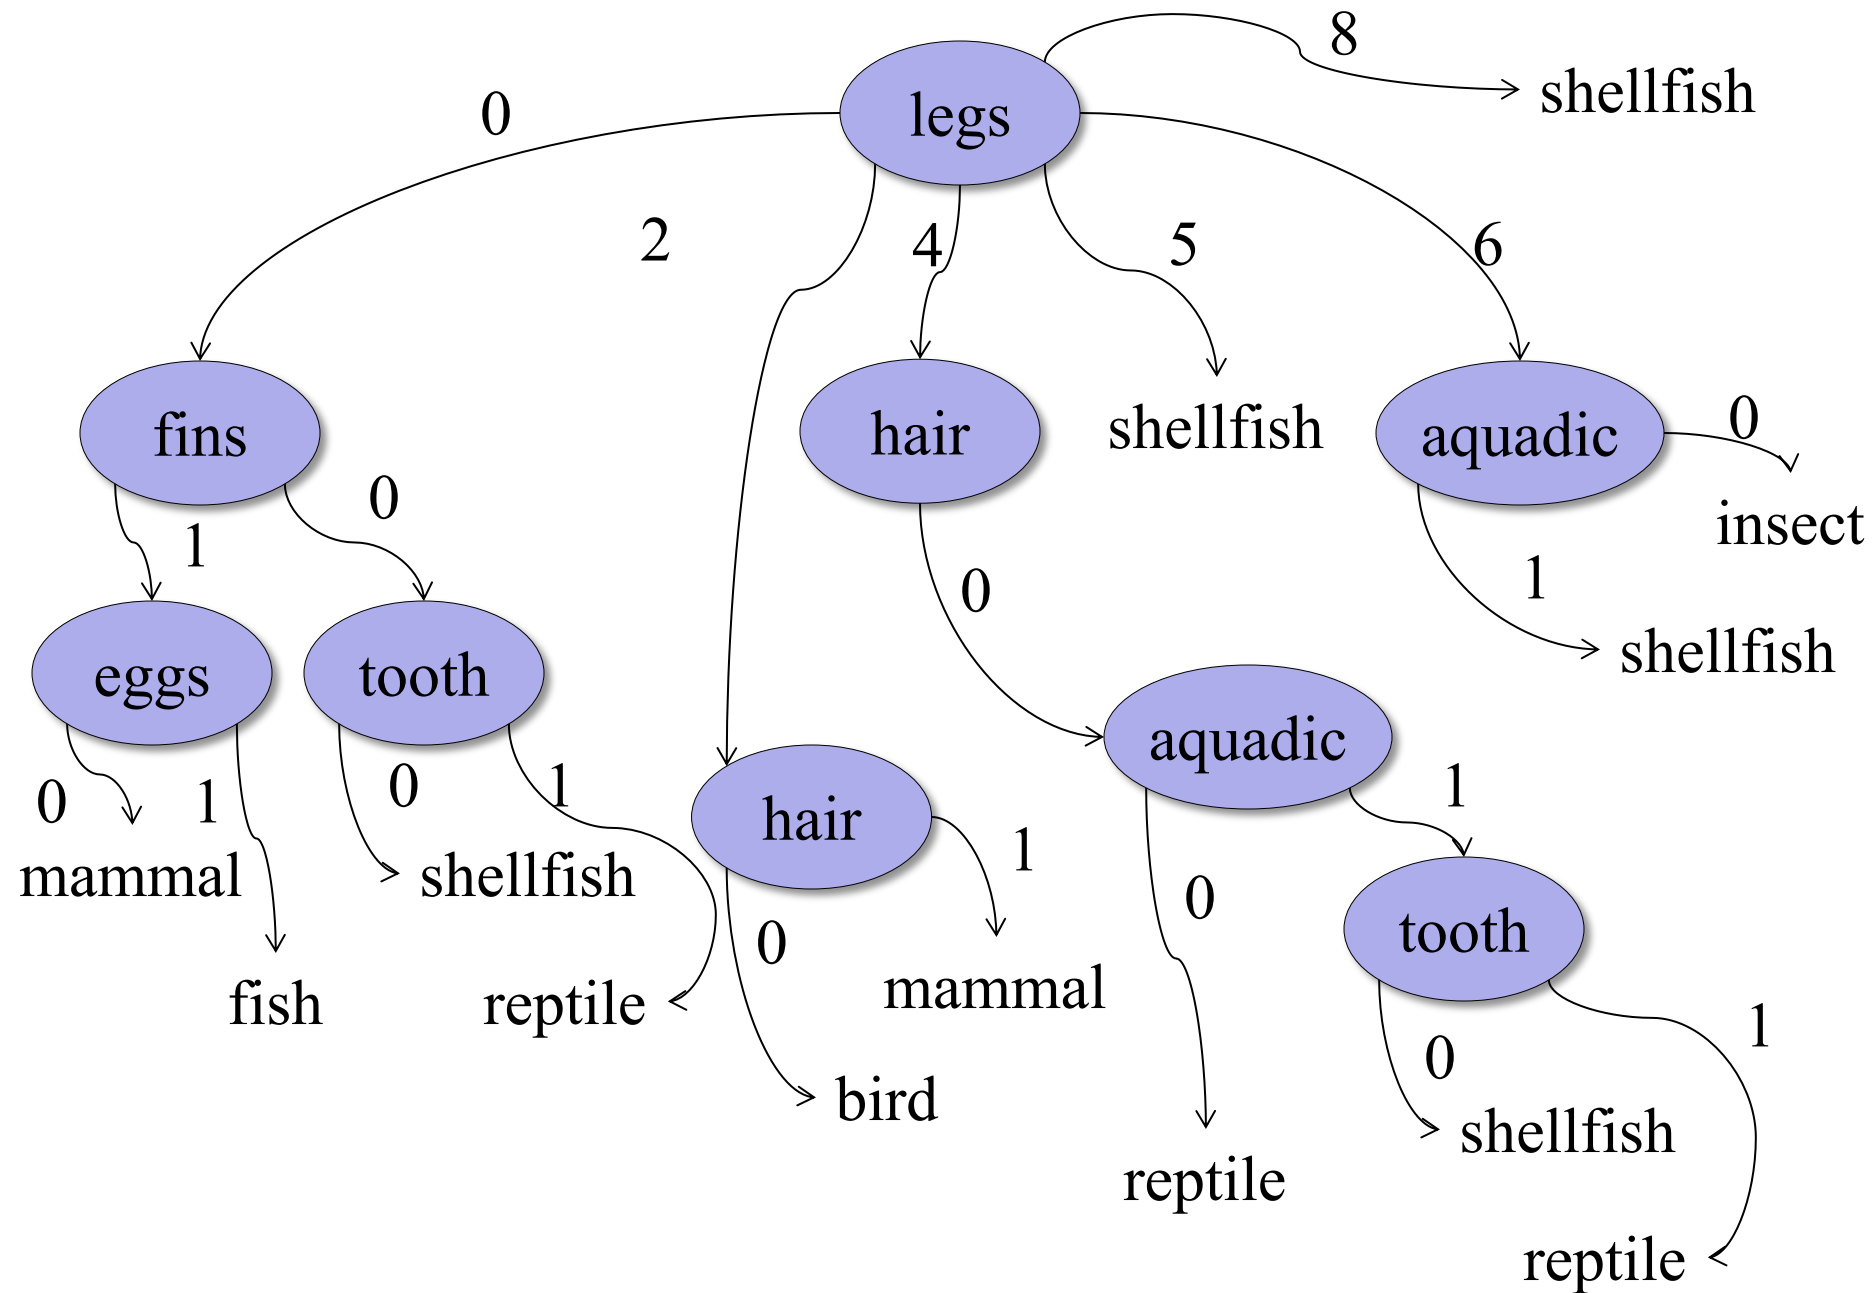

```
legs = 5 ==> RESULT = shellfish
```

```
legs = 6 ==> Test aquatic
```

```
    aquatic = 0 ==> RESULT = insect
```

```
    aquatic = 1 ==> RESULT = shellfish
```

```
legs = 8 ==> RESULT = shellfish
```

Zoo example

```
>>> dt.dt.display()
```

```
Test legs
```

```
legs = 0 ==> Test fins
```

```
  fins = 0 ==> Test toothed
```

```
    toothed = 0 ==> RESULT = shellfish
```

```
    toothed = 1 ==> RESULT = reptile
```

```
  fins = 1 ==> Test milk
```

```
    milk = 0 ==> RESULT = fish
```

```
    milk = 1 ==> RESULT = mammal
```

```
legs = 2 ==> Test hair
```

```
  hair = 0 ==> RESULT = bird
```

```
  hair = 1 ==> RESULT = mammal
```

```
legs = 4 ==> Test hair
```

```
  hair = 0 ==> Test aquatic
```

```
    aquatic = 0 ==> RESULT = reptile
```

```
    aquatic = 1 ==> Test toothed
```

```
      toothed = 0 ==> RESULT = shellfish
```

```
      toothed = 1 ==> RESULT = amphibian
```

```
  hair = 1 ==> RESULT = mammal
```

```
legs = 5 ==> RESULT = shellfish
```

```
legs = 6 ==> Test aquatic
```

```
  aquatic = 0 ==> RESULT = insect
```

```
  aquatic = 1 ==> RESULT = shellfish
```

```
legs = 8 ==> RESULT = shellfish
```

shark example
to the training
data & retraining**

Weka

- Open-source Java machine learning tool
- <http://www.cs.waikato.ac.nz/ml/weka/>
- Implements many classifiers & ML algorithms
- Uses common data representation format; easy to try different ML algorithms and compare results
- Comprehensive set of data pre-processing tools and evaluation methods
- Three modes of operation: GUI, command line, Java API

Weka Explorer

*ARFF = Attribute-Relation File Format

Weka demo

Install Weka

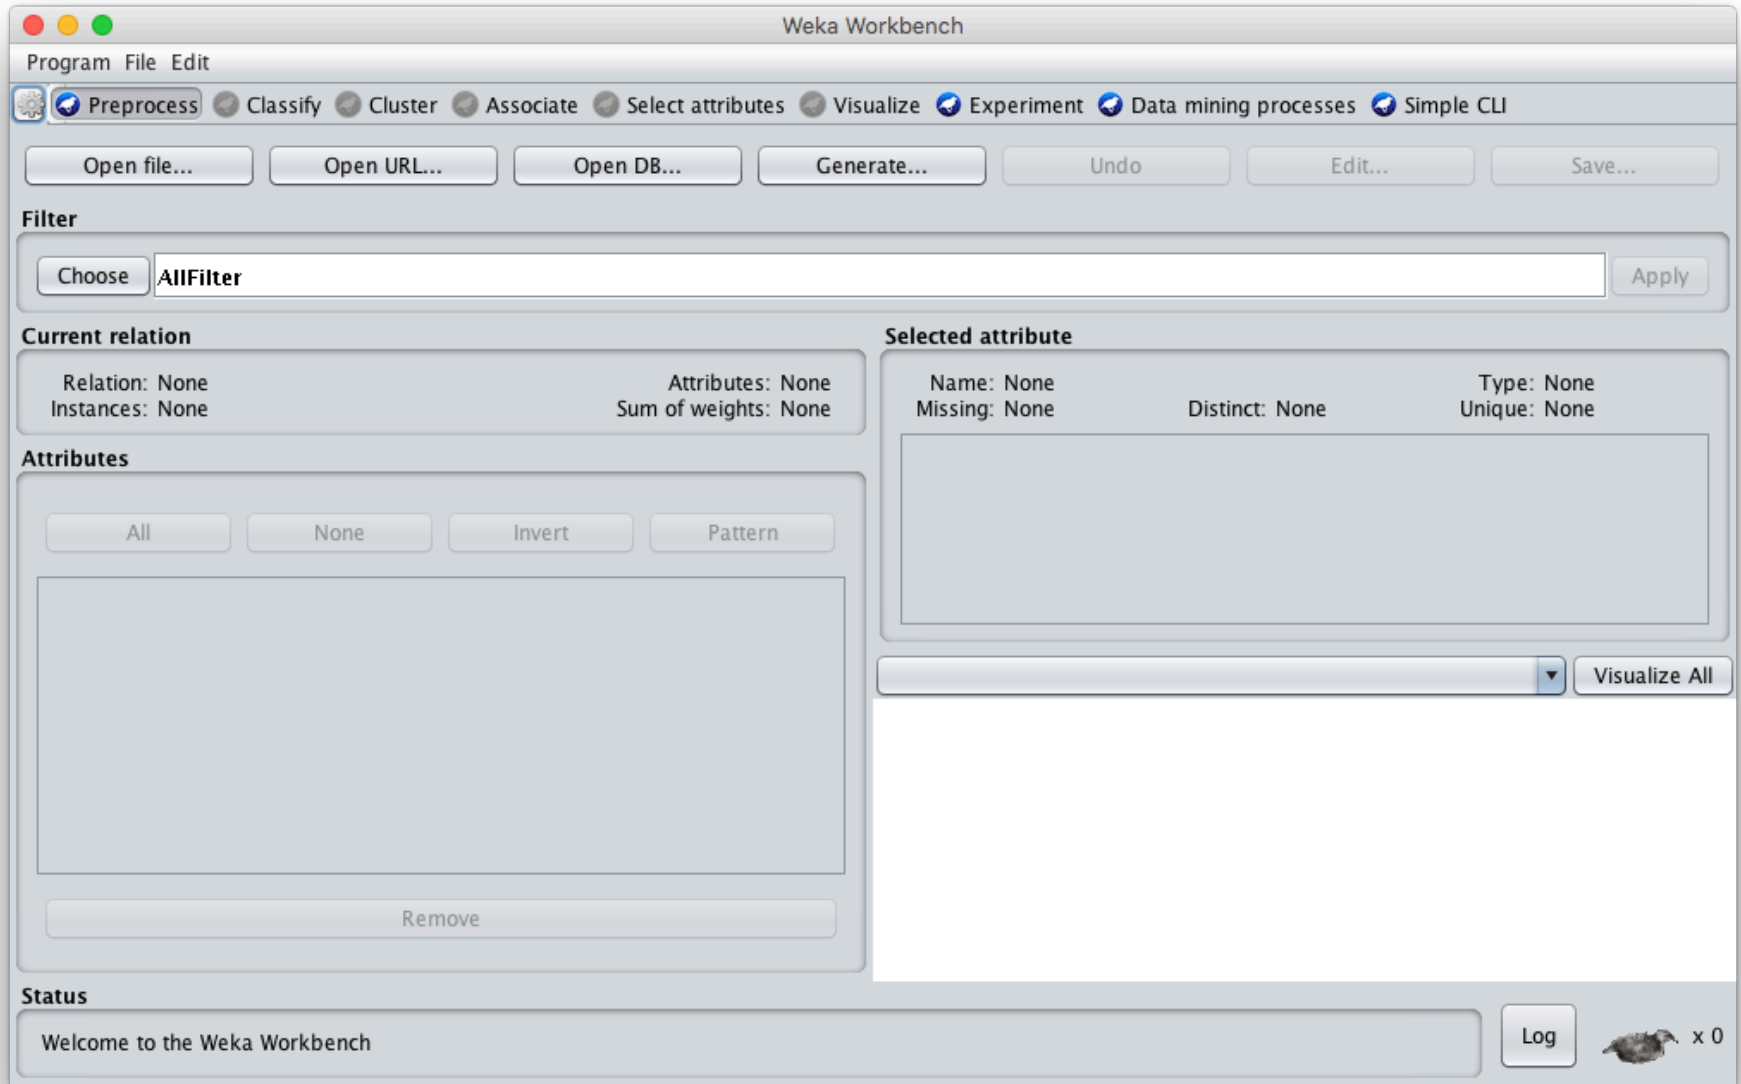

- Download and install Weka
- cd to your weka directory
- Invoke the GUI interface or call components from the command line
 - You will probably want to set environment variables (e.g., CLASSPATH) or aliases (e.g., weka)

Open Weka app

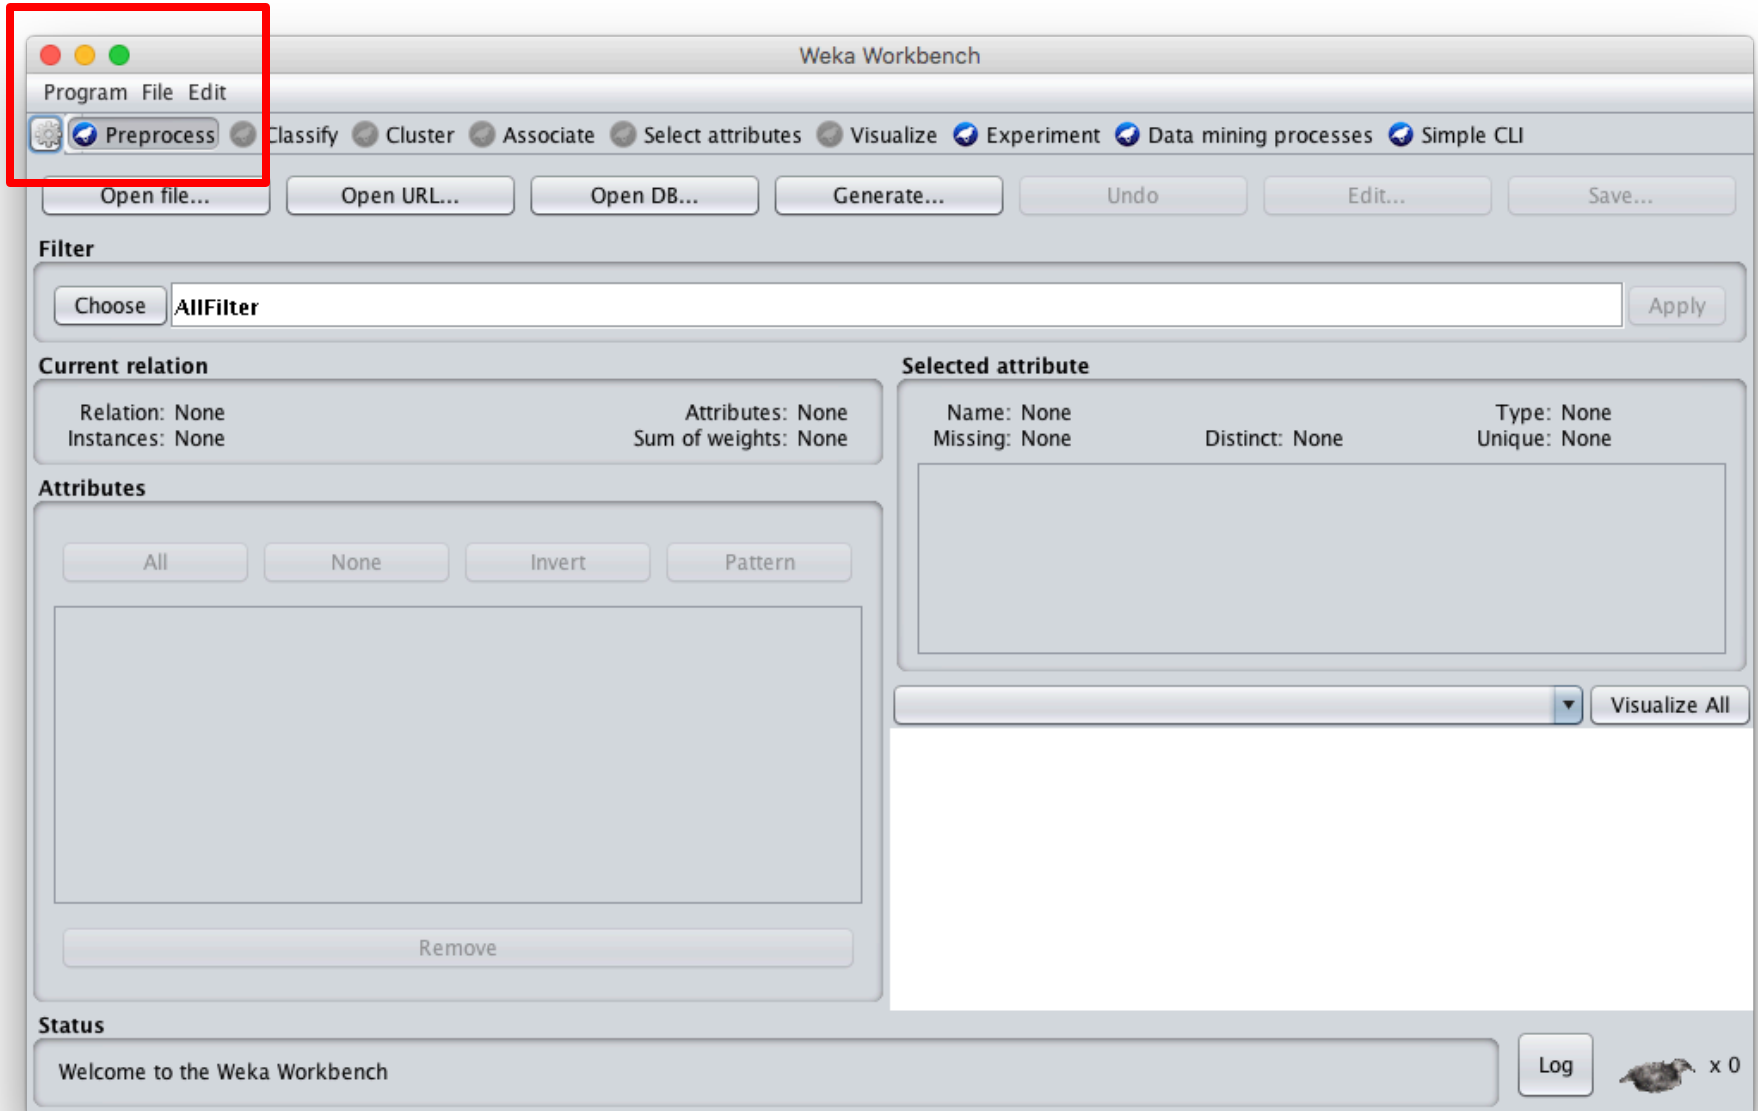

- `cd /Applications/weka`
`java -jar weka.jar`
- Available apps optimized for different tasks
- Start with Explorer

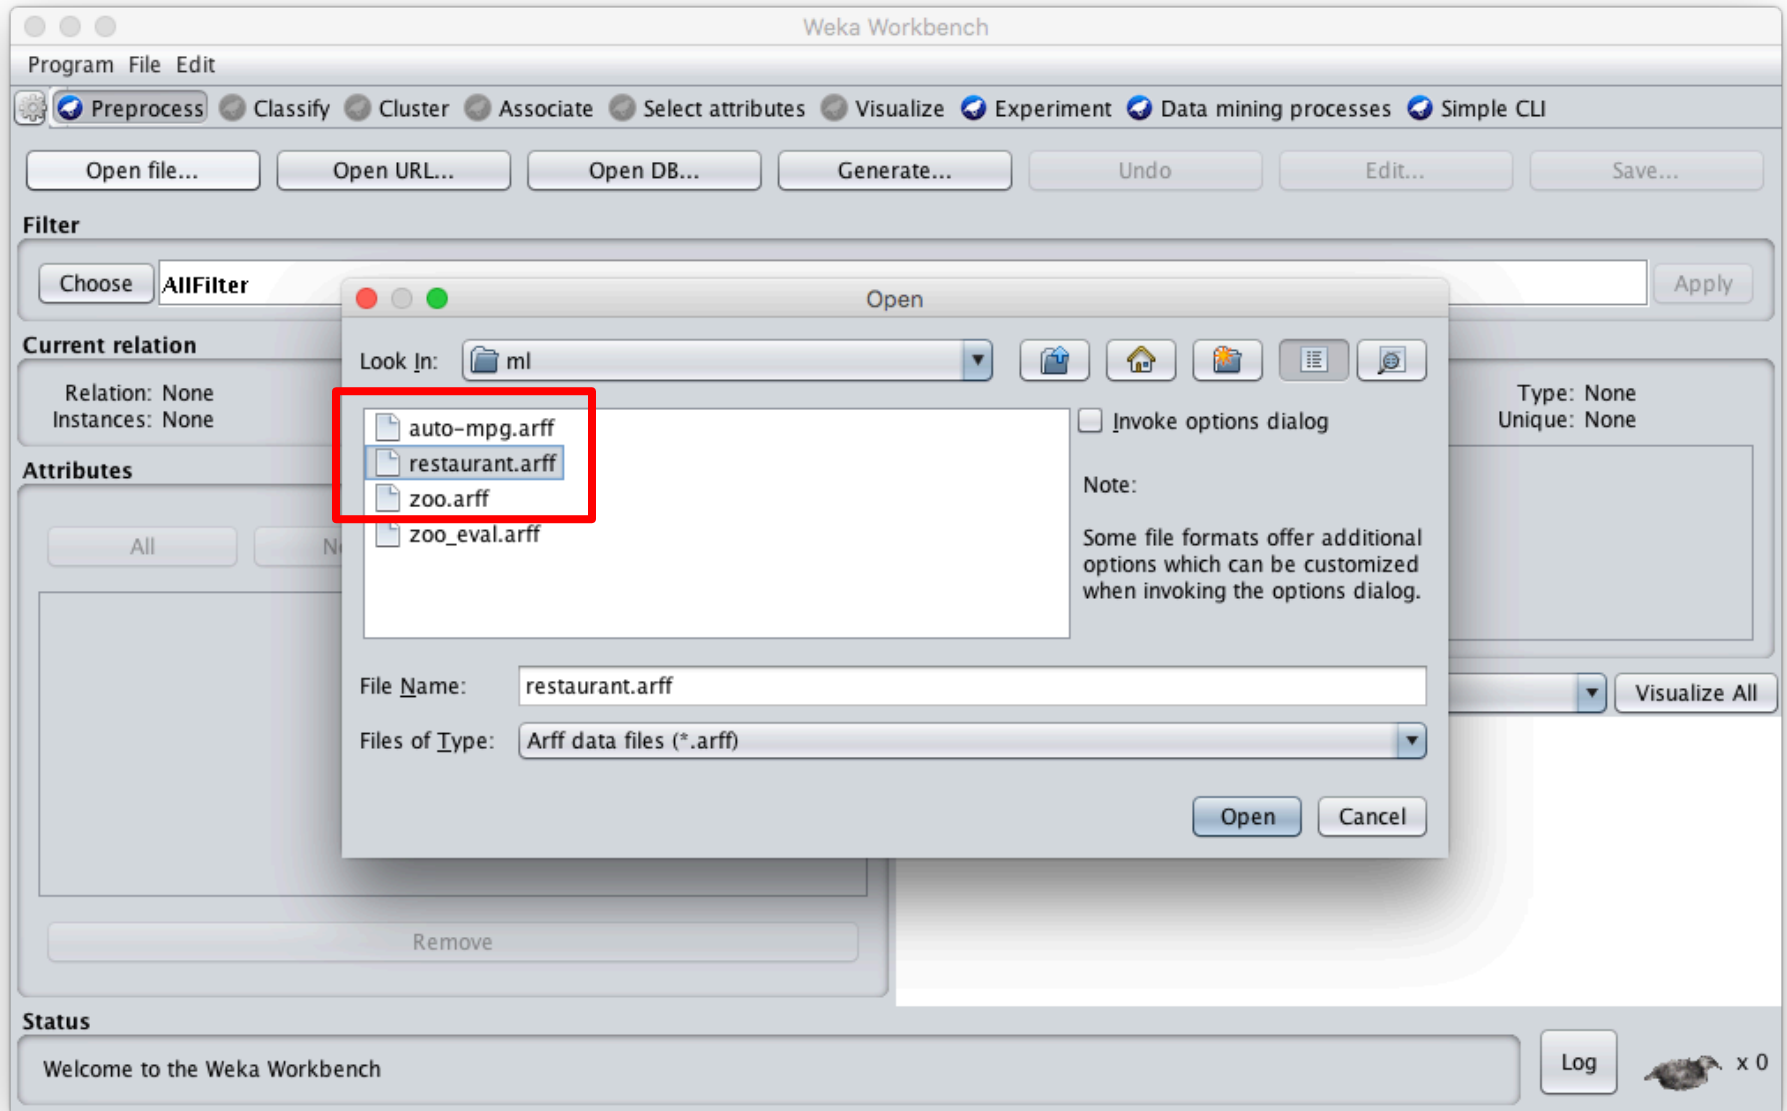

Explorer Interface

Starts with Data Preprocessing; open file to load data

Load restaurant.arff training data

We can inspect/remove features

Select classify then J48

Adjust parameters & training options; click start to train

See the training results

The screenshot shows the Weka Workbench interface. The 'Classifier' tab is active, and the 'J48 -C 1.0 -M 1' classifier is selected. The 'Test options' section shows 'Cross-validation' is selected with 10 folds. The 'Classifier output' pane displays the following results:

```
=== Classifier model (full training set) ===  
J48 pruned tree  
-----  
HowCrowded = None: No (2.0)  
HowCrowded = Some: Yes (4.0)  
HowCrowded = Full  
| Hungry = Yes  
| | IsFridayOrSaturday = Yes  
| | | Price = $: Yes (2.0)  
| | | Price = $$: Yes (0.0)  
| | | Price = $$$: No (1.0)  
| | IsFridayOrSaturday = No: No (1.0)  
| Hungry = No: No (2.0)  
  
Number of Leaves :    7  
Size of the tree :    11  
  
Time taken to build model: 0.05 seconds  
  
=== Stratified cross-validation ===  
=== Summary ===
```

The 'Result list' shows a single entry: '22:23:29 - trees.J48'. The 'Status' bar at the bottom indicates 'OK'.

Compare results

HowCrowded = None: No (2.0)
HowCrowded = Some: Yes (4.0)
HowCrowded = Full

**ID3 tree: nodes:12; leaves:8,
max depth:4**

scikit-learn

- Popular open source ML and data analysis tools for Python
- Built on [NumPy](#), [SciPy](#), and [matplotlib](#) for efficiency
- However decision tree tools are a weak area
 - E.g., data features must be numeric, so working with restaurant example requires conversion
 - Perhaps because DTs not used for large problems
- We'll look at using it to learn a DT for the classic [iris flower dataset](#)

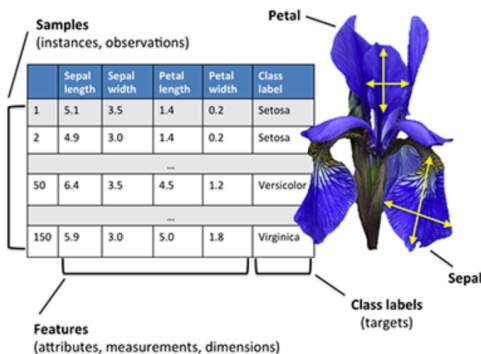

50 samples from each of three species of Iris (setosa, virginica, versicolor) with four data features length and width of the sepals and petals in centimeters

Scikit DT

Decision tree example using the classic IRIS [data set](#), which has 50 samples from each of three species of Iris (setosa, virginica, versicolor). Four features were measured from each sample: the length and width of the sepals and petals in centimeters.

Double-click (or enter) to edit

```
[1] from sklearn import tree
    from sklearn.datasets import load_iris
    import graphviz
```

The `load_iris()` function returns a scikit bunch object, which has a data and target for our iris dataset

The iris data is an 150x4 array and the iris target is a vector of 150 values

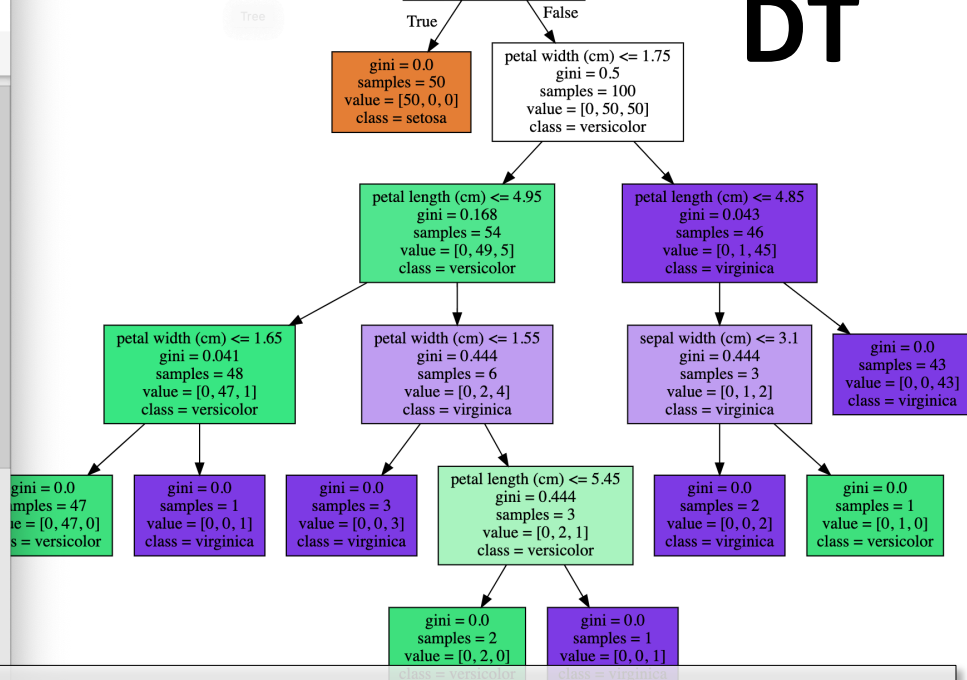

```
[2] iris = load_iris()
    print('data:', iris.data.shape, 'target', iris.target.shape)
```

```
↳ data: (150, 4) target (150,)
```

Use scikit's `DecisionTreeClassifier` and use the `fit()` method to build a decision tree classifier the data and target

```
[3] clf = tree.DecisionTreeClassifier()
    clf = clf.fit(iris.data, iris.target)
```

We can visualize the decision tree using the `Graphviz` open source graph visualization

```
from sklearn import tree, datasets
import graphviz, pickle
iris = datasets.load_iris()
clf = tree.DecisionTreeClassifier()
clf = clf.fit(iris.data, iris.target)
pickle.dump(clf, open('iris.p', 'wb'))
tree.export_graphviz(clf, out_file="iris.pdf")
```

<http://bit.ly/iris471>

Weka vs. scikit-learn vs. ...

- Weka: good for experimenting with many ML algorithms
 - Other tools are more efficient & scalable
- [Scikit-learn](#): popular and efficient suite of open-source machine-learning tools in Python
 - Uses NumPy, SciPy, matplotlib for efficiency
 - Preloaded into Google's [Colaboratory](#)
- Custom apps for a specific ML algorithm are often preferred for speed or features
