

These are some review questions to test your understanding of the material. Some of these questions may appear on an exam.

## 1 Splay Tree

Please see the rules for splaying on page 1.

- 1.1 Define *Splay tree*.
- 1.2 Show the result of inserting **2, 1, 4, 5, 9, 3, 6, 7** into an empty Splay tree (show the tree at the end of **each** insertion).
- 1.3 Show the result of deleting a given node in the tree.
- 1.4 What does the following statement mean?

“a splay tree has  $O(n \lg n)$  amortized performance over sequences of **insert**, **remove**, and **find** operations”

In particular, what does 'n' mean?

- 1.5 Explain, in English, how to insert a new element in a splay tree. Be sure to cover the situation in which the element is already in the tree.
- 1.6 Explain, in English, how to remove an element from a splay tree. Be sure to cover the situation in which the element to be removed is not in the tree.
- 1.7 Explain, in English, how to find an element in a splay tree. Be sure to cover the situation in which the element is not in the tree.

### Splaying Rules

To splay the node **X**:

1. If **X** is root, do nothing.
2. If **X** has no grandparent (*i.e.*, the parent of **X** is root), rotate **X** about its parent. This will make **X** be root.
3. If **X** has a grandparent:
  - (a) If **X** and its parent are both left-children or both right-children, rotate the parent about the grandparent, then rotate **X** about its parent.
  - (b) If **X** and its parent are opposite-type children (one is left, the other is right) rotate **X** about its parent, then rotate **X** about its new parent (*i.e.*, its former grandparent).
