#### Red-Black Trees

Bottom-Up Deletion

### Recall "ordinary" BST Delete

- 1. If vertex to be deleted is a leaf, just delete it.
- 2. If vertex to be deleted has just one child, replace it with that child
- 3. If vertex to be deleted has two children, replace the <u>value</u> in the node by its in-order predecessor/successor's value then delete the in-order predecessor/successor (a recursive step)

#### Bottom-Up Deletion

- 1. Do ordinary BST deletion. Eventually a "case 1" or "case 2" deletion will be done (leaf or just one child).
  - -- If deleted node, U, is a leaf, think of deletion as replacing U with the NULL pointer, V.
  - -- If U had one child, V, think of deletion as replacing U with V.
- 2. What can go wrong??

# Which RB Property may be violated after deletion?

1. If U is red?

Not a problem – no RB properties violated

2. If U is black?

If U is not the root, deleting it will change the black-height along some path

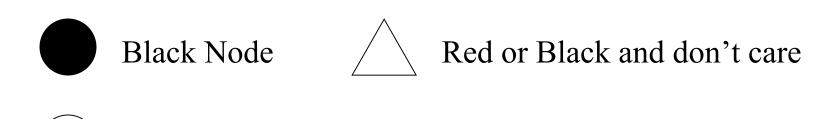

### Fixing the problem

- Think of V as having an "extra" unit of blackness. This extra blackness must be absorbed into the tree (by a red node), or propagated up to the root and out of the tree.
- There are four cases our examples and "rules" assume that V is a left child. There are symmetric cases for V as a right child

### Terminology

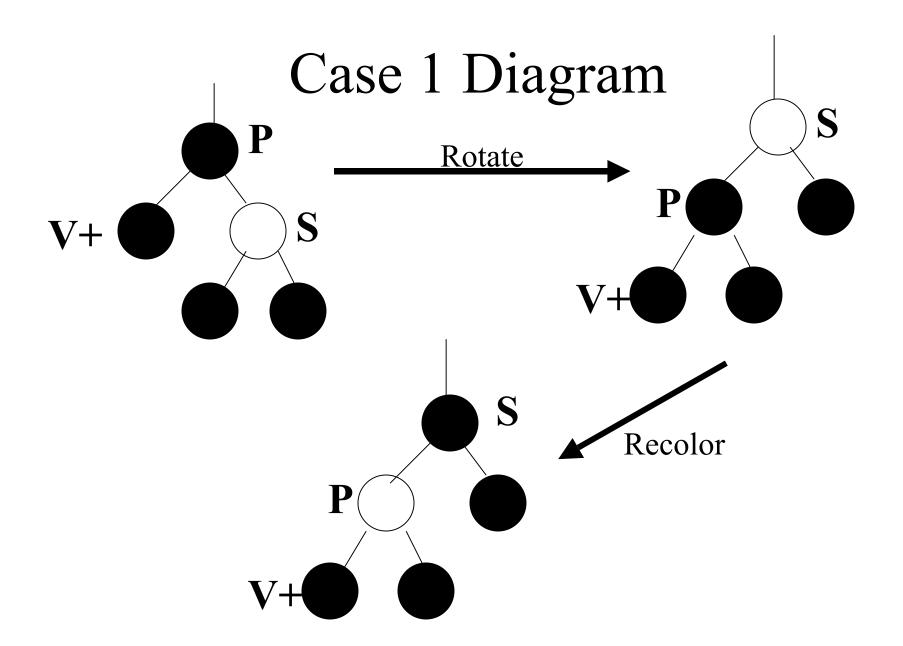

- The node just deleted was U
- The node that replaces it is V, which has an extra unit of blackness
- The parent of V is P
- The sibling of V is S

Red Node

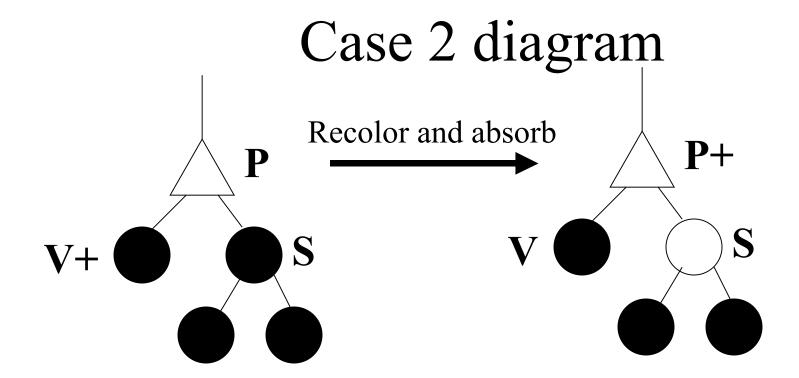

# Bottom-Up Deletion Case 1

- V's sibling, S, is Red
  - Rotate S around P and recolor S & P
- NOT a terminal case One of the other cases will now apply
- All other cases apply when S is Black

# Bottom-Up Deletion Case 2

- V's sibling, S, is black and has <u>two black</u> <u>children</u>.
  - Recolor S to be Red
  - P absorbs V's extra blackness
    - If P is Red, we're done
    - If P is Black, it now has extra blackness and problem has been propagated up the tree

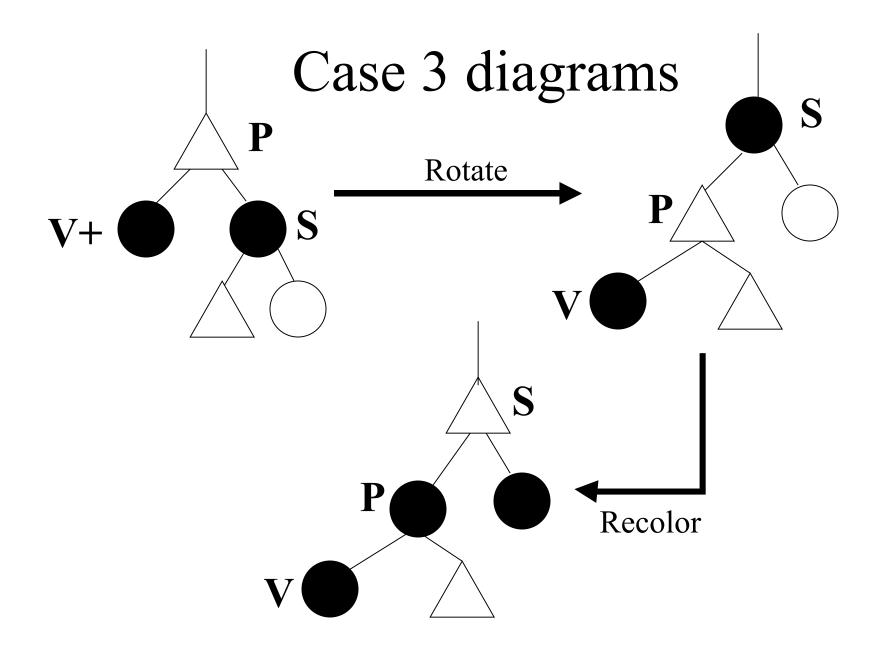

Either extra black absorbed by P or

P now has extra blackness

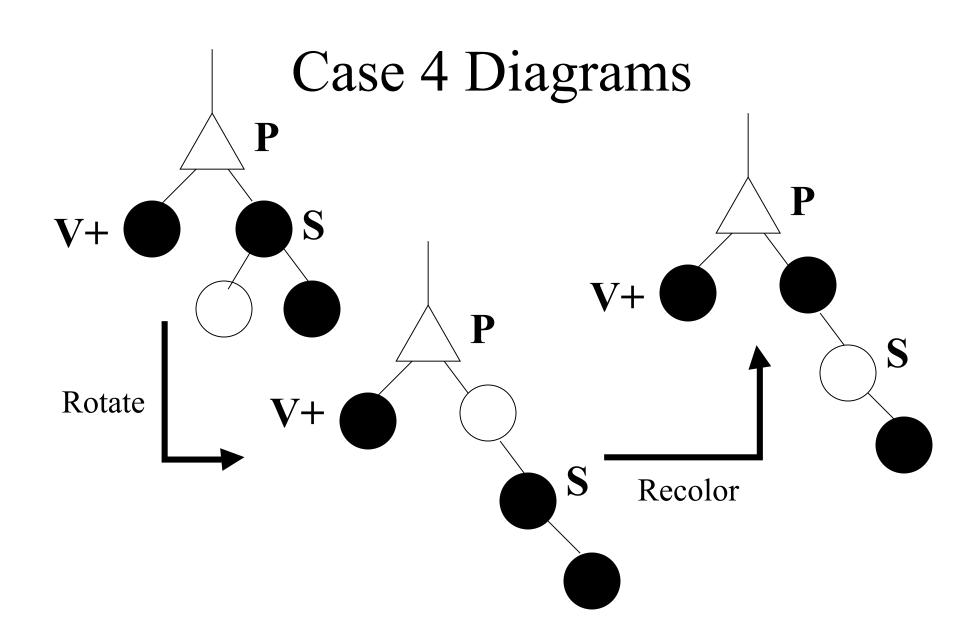

# Bottom-Up Deletion Case 3

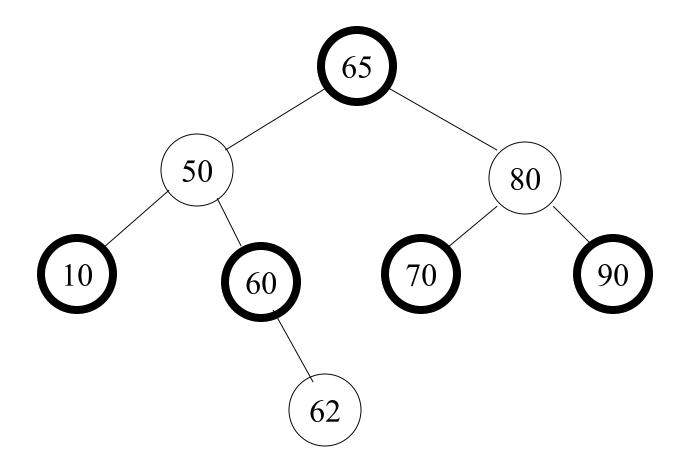

- S is black
- S's RIGHT child is RED (Left child either color)
  - Rotate S around P
  - Swap colors of S and P, and color S's Right child
     Black
- This is the terminal case we're done

# Bottom-Up Deletion Case 4

- S is Black, S's right child is Black and S's left child is Red
  - Rotate S's left child around S
  - Swap color of S and S's left child
  - Now in case 3

Perform the following deletions, in the order specified Delete 90, Delete 80, Delete 70
