

Steps to setup Cadence Tools

Create a new directory in your home directory. You can also create a sub-directory in the new directory for cadence if you want.

Command: ***mkdir <name of directory>***

cd into the directory that you want to setup cadence tools.

Command: ***cd <name of directory>***

Copy the setup files in the directory that you want to setup the tools. Remember the . at the end with a space before it.

Command: ***cp /afs/umbc.edu/software/cadence/etc/setup_2017/setup_files/cadence_setup.tar .***

Un-tar the setup tar file

Command: ***tar -xvf cadence_setup.tar***

You should see a bunch of files now in your directory.

The commands to run vhd simulation are:

run_ncvhdl.bash

run_ncelab.bash

run_ncsim.bash

The command to run virtuoso (schematic, layout, simulations etc.) is:

launch_virtuoso.bash
